insinkerator® FOODSERVICE

Fast. Convenient. Useful.

The Instant Hot Water Dispenser.

Install InSinkErator® instant hot water dispenser systems and speed up the things you do. What can you get done with 200°F water from the simple flip of a lever? How about this –

- Prepare sauces and mixes
- Rethermalize packaged products
- Reconstitute dried foods
- Mix hot cereals and beverages
- Pre-warm water to get a jumpstart on the mixing of dough, gravies and more.

There is absolutely no limit to the usefulness of near-boiling water on demand.

Installation is easy and operation is simple. This is the one addition that will pay for itself in customer satisfaction and improved staff efficiencies.

Excellent for restaurant kitchens
Perfect for extended stay hotels
Just Right for breakfast programs
Ideal for independent living communities

Instant Hot Water Dispensers. The usefulness is unlimited.

There is an InSinkErator® instant hot water system to fit any installation or facility. The stylish Model C1300™ features a swiveling gooseneck and is constructed of solid brass for durability and long-lasting performance. The chrome-plated Model H778™ features a functional design and durable twist-handle operation.

Model C1300™

100 cups per hour of near-boiling water

Durable all brass construction with swiveling gooseneck

1300 watt water heating element

Model H778™

100 cups per hour of near-boiling water

Chrome-plated faucet with traditional twist-handle operation

1300 watt water heating element

Both dispensers and tank systems include:

200˚F near-boiling water • 2/3-gallon Stainless Steel Tank • Easy-to-adjust temperature control
Instant, self-closing hot water valve • Mounts in standard sink opening or 1-1/4" drilled hole
Available in Chrome finish • 1-year full warranty on parts and labor

How the system works:

The 2/3-gallon stainless steel hot water tank, located below the sink, is connected to the stylish faucet. Water from the cold-water supply line flows through the specially designed faucet and is directed into the stainless steel tank, where it's heated to 200°F. As the hot water is dispensed, more water replaces it in the tank.
